

WATER REPELLENT

Sudden rain while going out, the favorite denim gets wet, even at such times the Water repellent can reduce water penetration, and repels water under concept
“To get Water - repellent function more familer”.
It was added in the garment washing in the past, we applied Water repellent finishing process in fabric.

STRONG POINT

1 Environmentally conscious

We do not use fluorine, developed silicone as the main ingredient with our own prescription.

2 Quality stability

High quality stability through continuous processing.

3 Washing durability

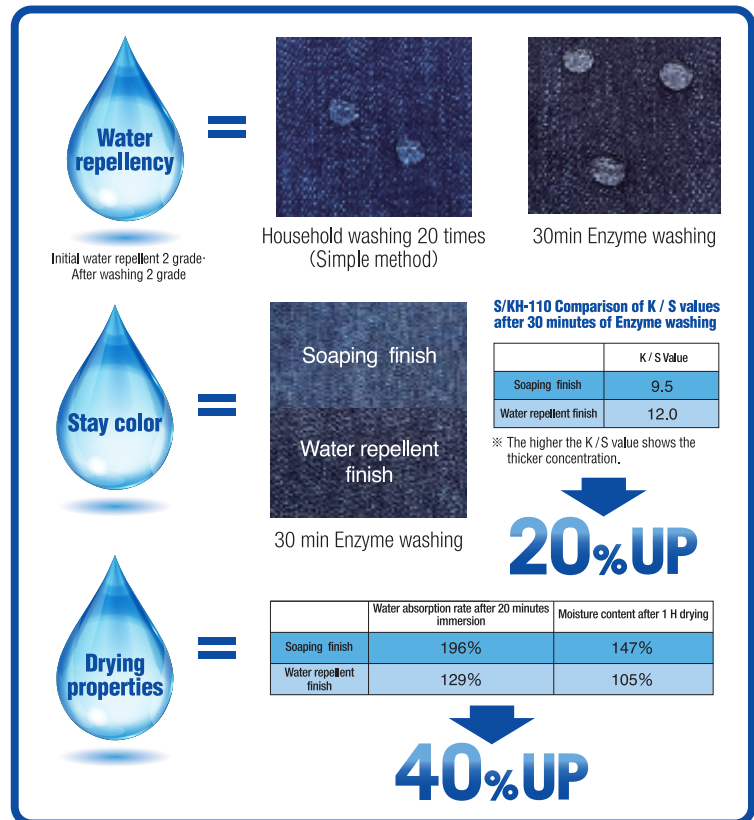

Keep water repellent even with general denim washing.

4 Stay color

Compared to Regular finishing method of usual, it keeps color.

4 Quick drying

It is hard to absorb water, the drying speed is Fast.

ATTENTION

- ※ It is not "waterproofed", water may be soaked in.
- ※ We recommend washing in the condition that it is behind to maintain water repellent performance for a longer time.
- ※ The water repellent performance may change according to the fabric specification.
- ※ In household goods quality indication method it is possible to display "water repellent" at the initial water repellent grade 2 - after washing with water repellent grade 2.
- ※ Water absorption is low, so drying time is shortened.
